

Homogenization in the CarpatClim Climate of the Carpathian Region project

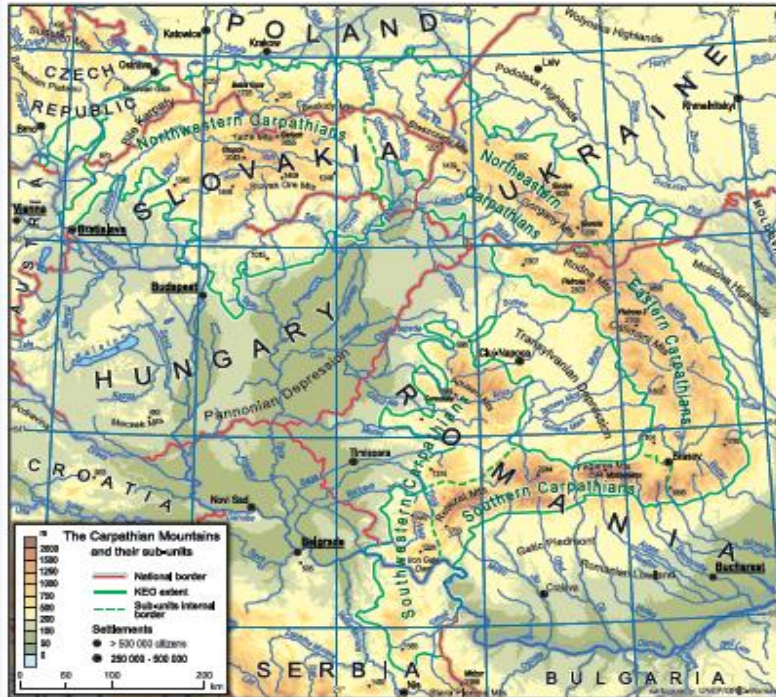

Lakatos, M., Szentimrey, T., Bihari, Z., Szalai, S
lakatos.m@met.hu

Alapítva: 1870

The target area of the project: between latitudes 50°N and 44°N, and longitudes 17°E and 27°E

Basic variables, daily basis, 1961-2010, 0.1°

Variable	Description	units
Ta	2 m mean daily air temperature	°C
Tmin	Minimum air temperature	°C
Tmax	Maximum air temperature	°C
p	Accumulated total precipitation	mm
DD	10 m wind direction, Degrees	0-360
VV	10 m horizontal wind speed	m/s
Sunshine	Sunshine duration	hours
cc	Cloud cover	tenths
Rglobal	Global radiation	J/cm ²
RH	Relative humidity	%
pvapour	Surface vapour pressure	hPa
pair	Surface air pressure	hPa
Snow depth	Snow depth (ZAMG model)	cm

Module 1 SHMU
Meta data collection,
data rescue, **near
border data exchange,
homogenization**

Module 2 OMSZ
Data harmonization,
creation of the
interpolated data

Module 3 RHSS
Digital climate
atlas, data download,
metadata catalogue

**freely available, ~ 10 km
resolution, gridded
database, 1961-2010**

Methodology: commonly used procedures, by country execution

MASHv3.03 (Multiple Analysis of Series for Homogenization; Szentimrey, T.) for homogenization, quality control and missing value completion of station daily data series

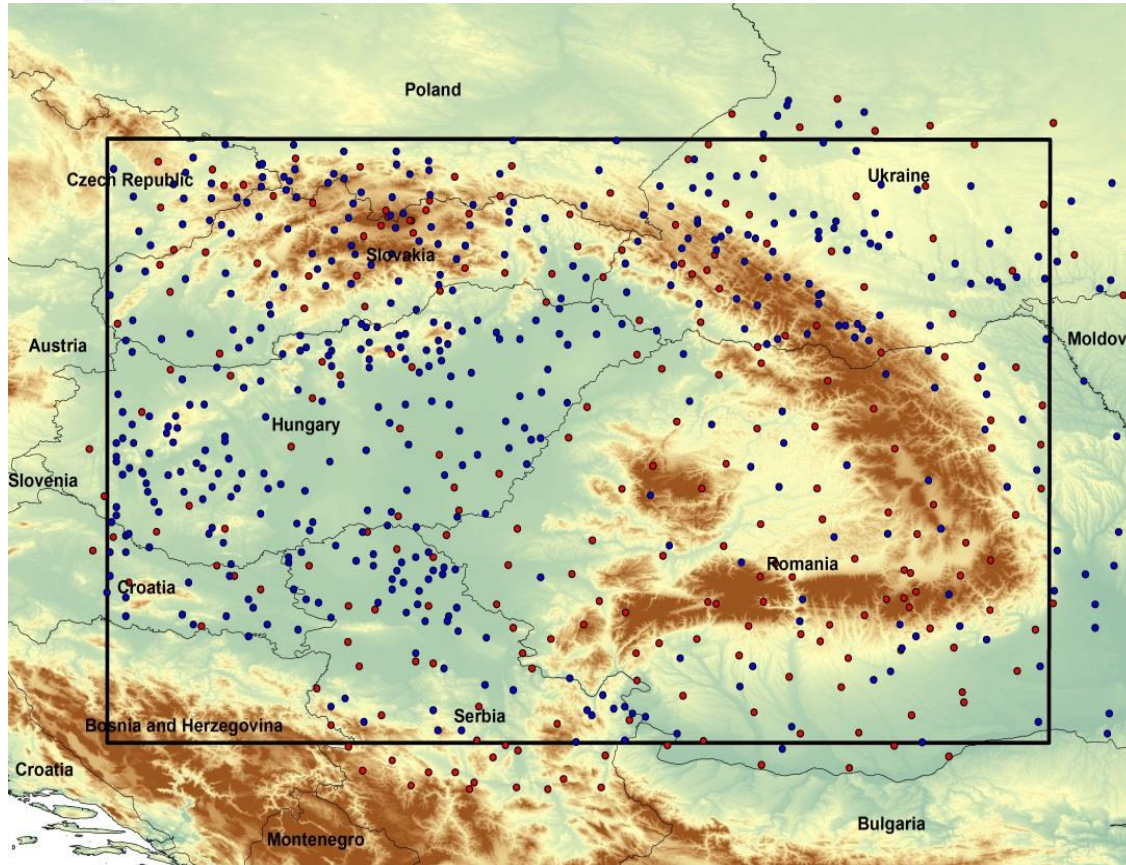

COST ES0601 „HOME” action: good monthly benchmark results and promising daily tests, automatic method, documented homogenization process

MISHv1.03 (Meteorological Interpolation based on Surface Homogenized Data Basis; Szentimrey, T. and Bihari, Z.) for gridding (interpolation)

Specially developed for interpolation of meteorological data, the modeling part and the gridding part could be run by countries. The gridded daily time series were generated automatically in one step for the 50 years long period.

Spatial distribution of stations used

**415 climate
stations and
904
precipitation
stations**

Main steps from raw data to gridded value

Module 1

Near border data
exchange **before**
homogenization

Homogenization, QC of
data series **per country**
by MASH

Data exchange **after**
homogenization

Controlling of cross
border harmonization
by MASH

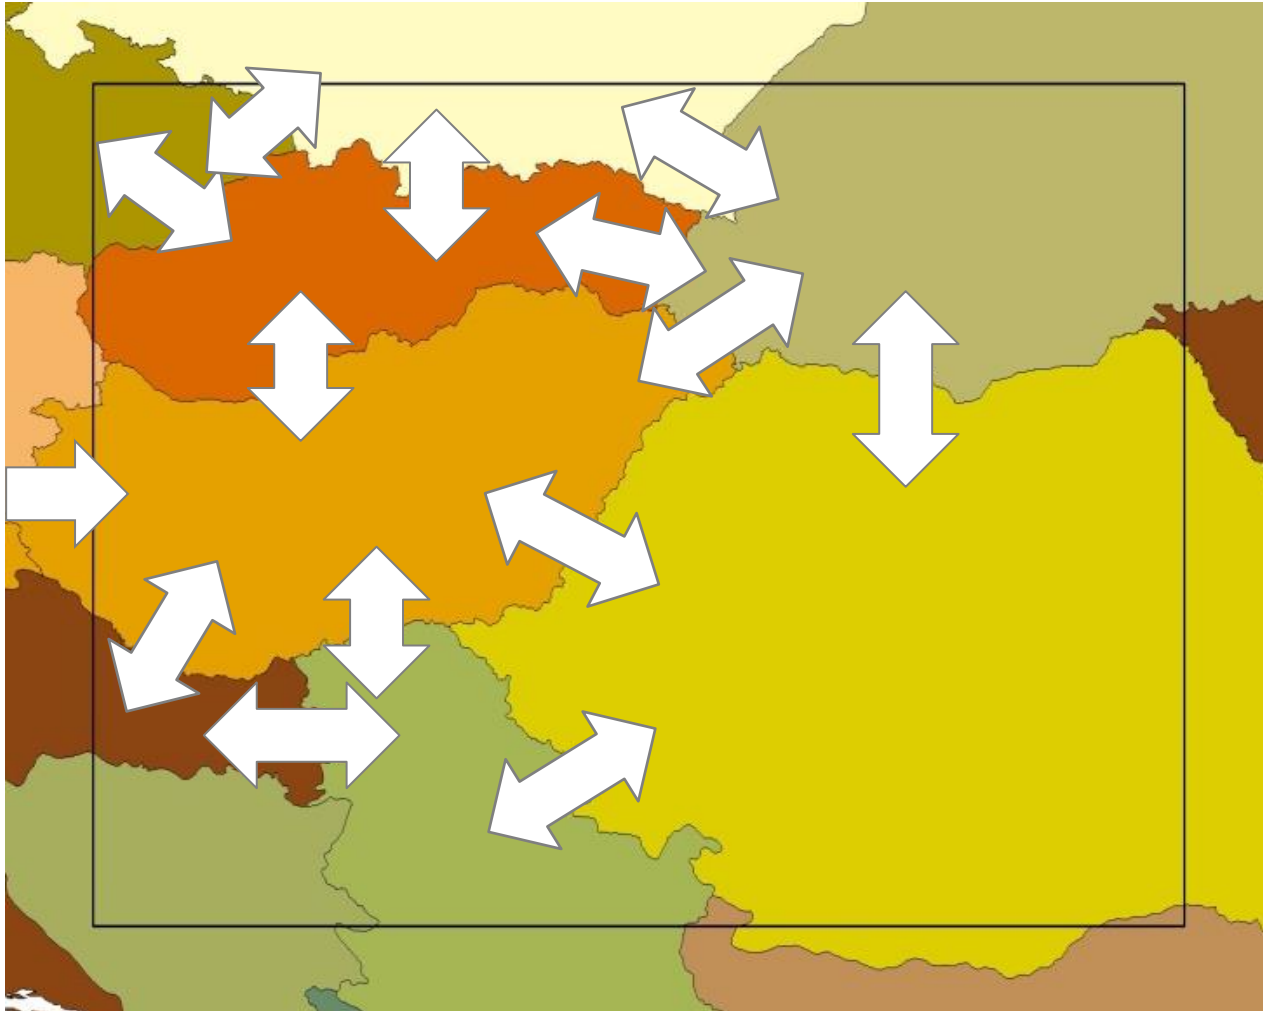

Module 2

Gridding **per country**
by MISH using the
exchanged data

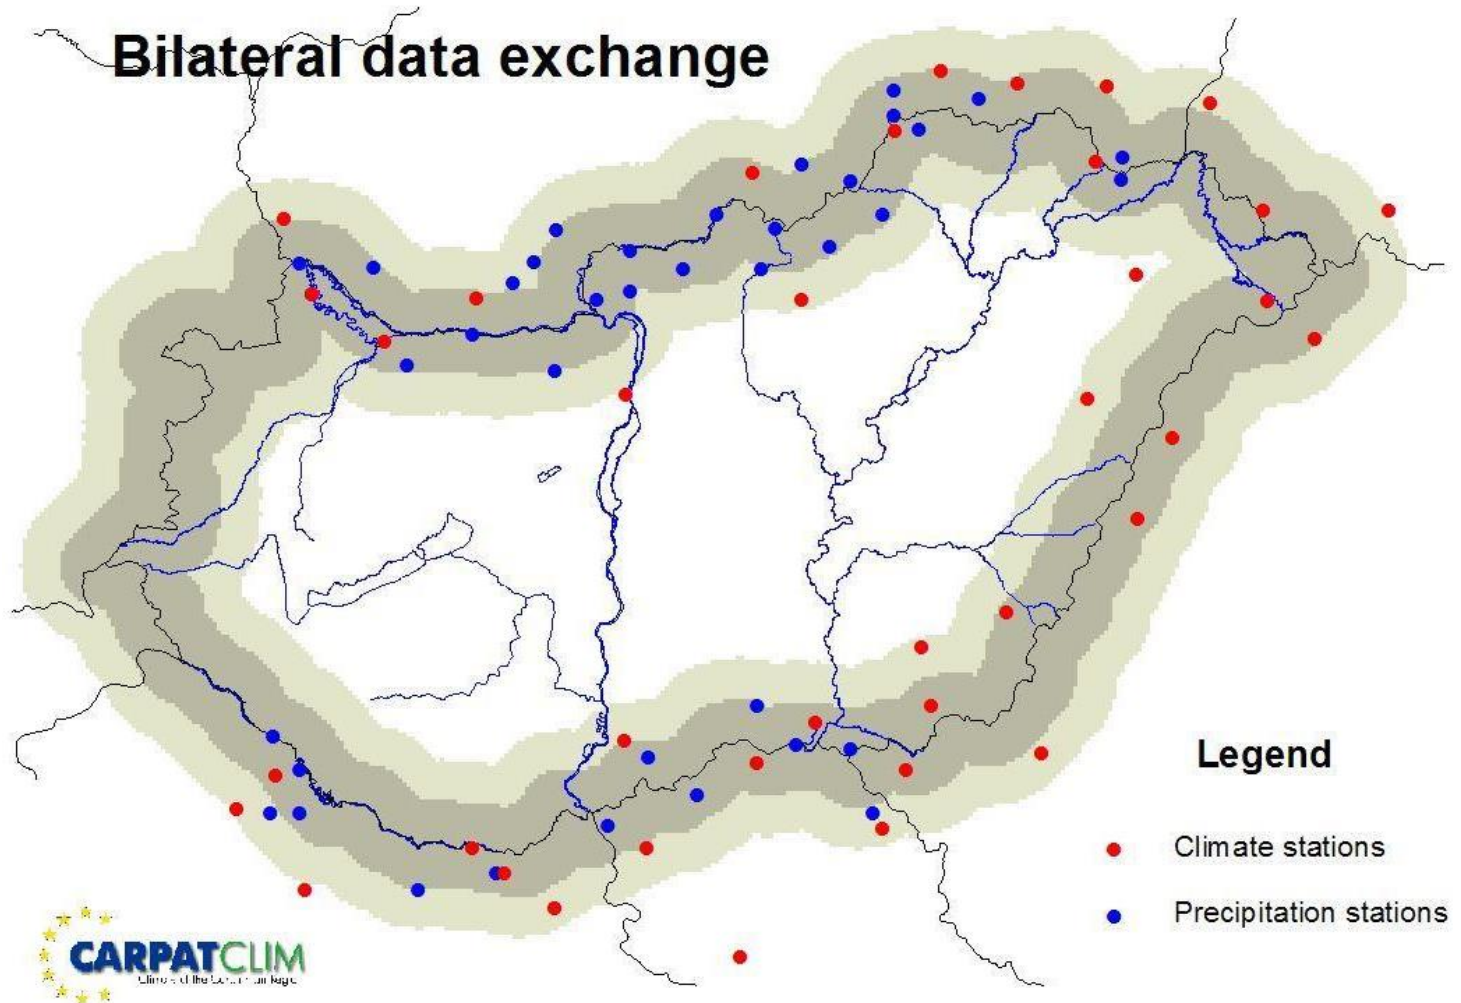

Compilation of
gridded series of
the countries into
one file

Harmonization: near border data exchange before and after homogenization

Example

Bilateral data exchange

Legend

- Climate stations
- Precipitation stations

Main steps of homogenization process in CCR

1. **Monthly series derivation** from daily series.
2. MASH homogenization procedure for monthly series, **estimation of monthly inhomogeneities**. (Metadata can be used automatically.)
3. Smooth **estimation of daily inhomogeneities** on the basis of estimated monthly inhomogeneities.
4. **Automatic correction of daily series**.
5. Automatic **quality control (QC)** of homogenized daily data.
6. **Automatic missing daily data completion**.
7. **Monthly series derivation** from the homogenized, quality controlled, and completed daily data.
8. **Test of homogeneity** for the new monthly series with using the automatic verification results.

Deliverables

- D1.6 - Report of data inventory of meteorological stations per month to be considered for the service, including the specification of existing data gaps and proposed methodologies to fill them, and of existing analogue datasets to be digitized
- D1.10 - Final report on the documentation of the data rescue and digitization exercise, per country
- D1.12 - Final report on quality control and data homogenization measures applied per country, including QC protocols and measures to determine the achieved increase in data quality**
- D1.15 - Implemented drafts version of metadata per country of meteorological stations selected for this project, including the length of record and observed parameters per station
- D2.5 - Report with final results of the data harmonization procedures applied, including all protocols, per country
- D2.8 - Final version of gridded datasets of all harmonized and spatially interpolated meteorological parameters per country
- D2.9 - Final report on the creation of national gridded datasets, per country
- D2.10 - Final version of metadata per country of all national gridded datasets created within Module 2
- D3.6 - Description of the final version of all gridded data sets of the climatology of the Carpathian Region
- D3.7 - Final report on the production of the climatology of the Carpathian Region
- D3.9 - Final version of interpretation sheets for all gridded datasets, publically downloadable with the datasets
- D3.12 - Final and public version of the implemented web site with full functionality that hosts all relevant information on the Climate Atlas of the Carpathian Region, including a public download functionality within the web site for all gridded datasets of the climatology
- D3.16 - Final version of the fully implemented and publically accessible metadata catalogue of the Carpathian Atlas, containing all metadata generated during all three modules of the project

206 pages

Validation

Average test statistics, QC results and verification results for minimum temperature

Station System	1	2	3	4	5	6	7
Number of stations	68	39	140	53	59	38	18
TS after homog. (TSa)	24.3	52.5	52.5	51.9	28.5	43.5	37.8
TS before homog. (TSb)	227.5	484.7	128.3	120.3	179.7	141.3	93.9
Relative modification (%)	42	28	14	13	22	23	21
Total number of errors	4110	2161	6689	4111	3197	2592	375
Maximal positive error (°C)	23.7	11.8	95.1	79.3	14.9	15.9	0.7
Minimal negative error (°C)	-9.7	-8.0	-416.6	-417.6	-9.9	-10.0	-1.1

Critical value for TS is 20.86 (0.05 p level)

□ (TSb-TSa)/TSb ■ Relative modification of series
