

Homogenisation of Monthly Maximum and Minimum Air Temperatures in Ireland.

Mary Curley and Seamus Walsh,
Climatology and Observations Division,
Met Éireann, Dublin 9, Ireland

Nr of t min data in network 000008

Max and min long temperature series 1961-2010

Min temperature series

- Total number of stations: 58
- 38 stations had breaks
- Total number of breaks: 69
- Number of verified breaks: 20

Max temperature series

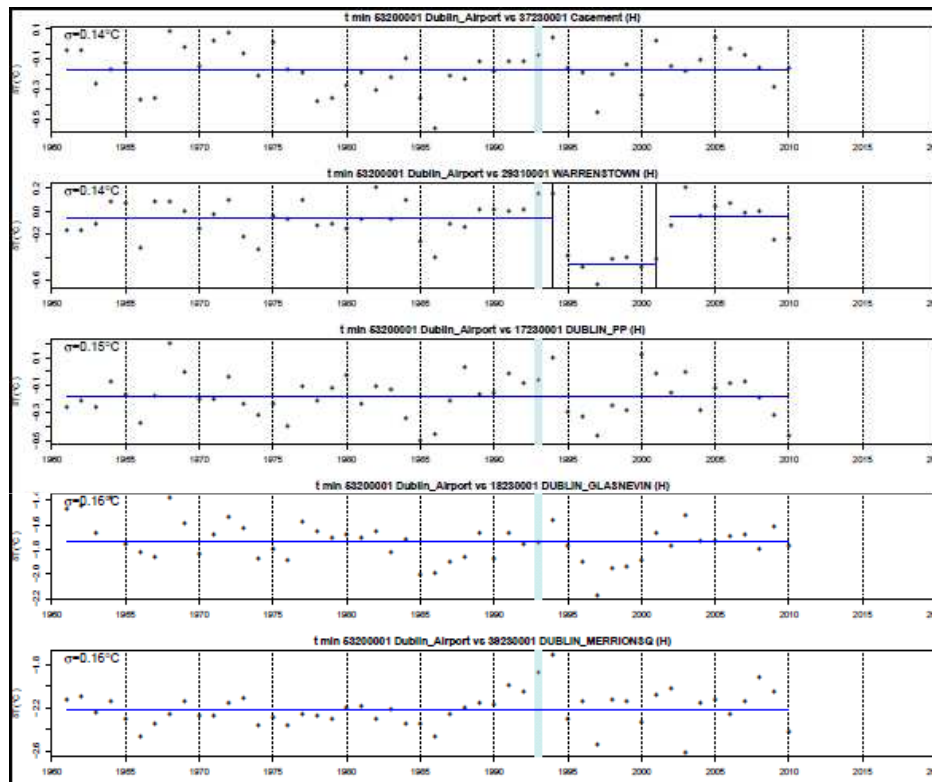

- Total number of stations: 58
- 41 stations had breaks
- Total number of breaks: 68
- Number of verified breaks: 19

Dublin Airport

Reason for break: relocation of station at airport

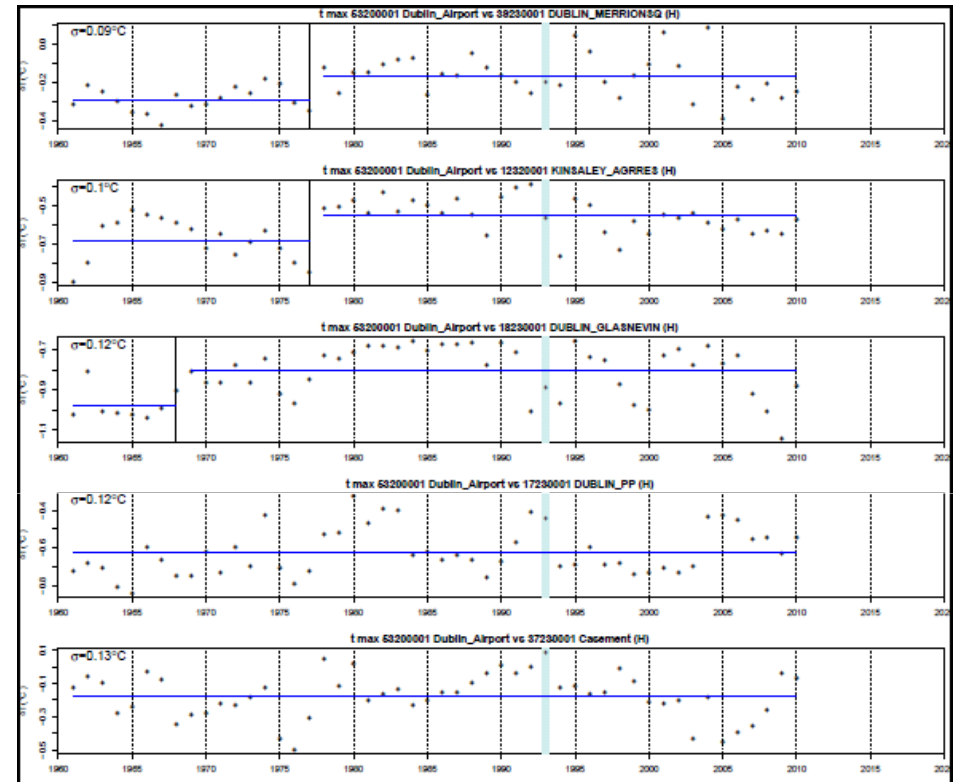

Min temperature

Break amplitude: -1.03

Max temperature

Break amplitude: -0.16

Shannon Airport

Reason for break: relocation of station at airport

Min temperature

- Break amplitude: -0.38
- Approx. -0.55 in September

Max temperature

- Break amplitude: -0.60
- Approx. -0.8 in summer JJA

Markree Castle

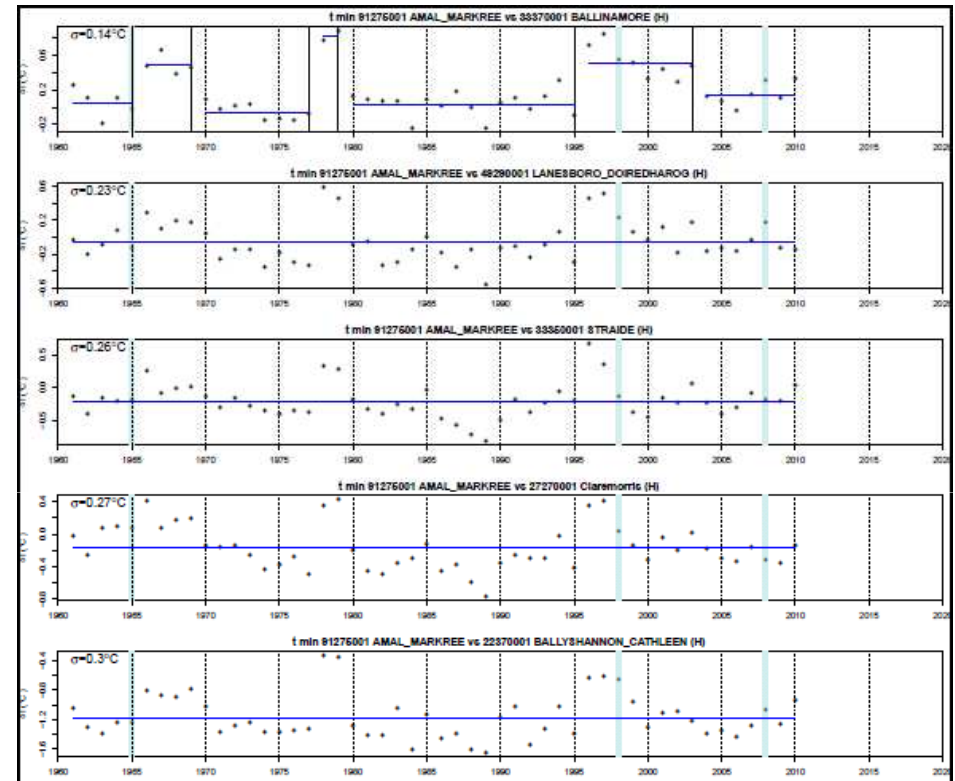

Station established in 1860

None of the breaks verified. Max and min breaks in same years

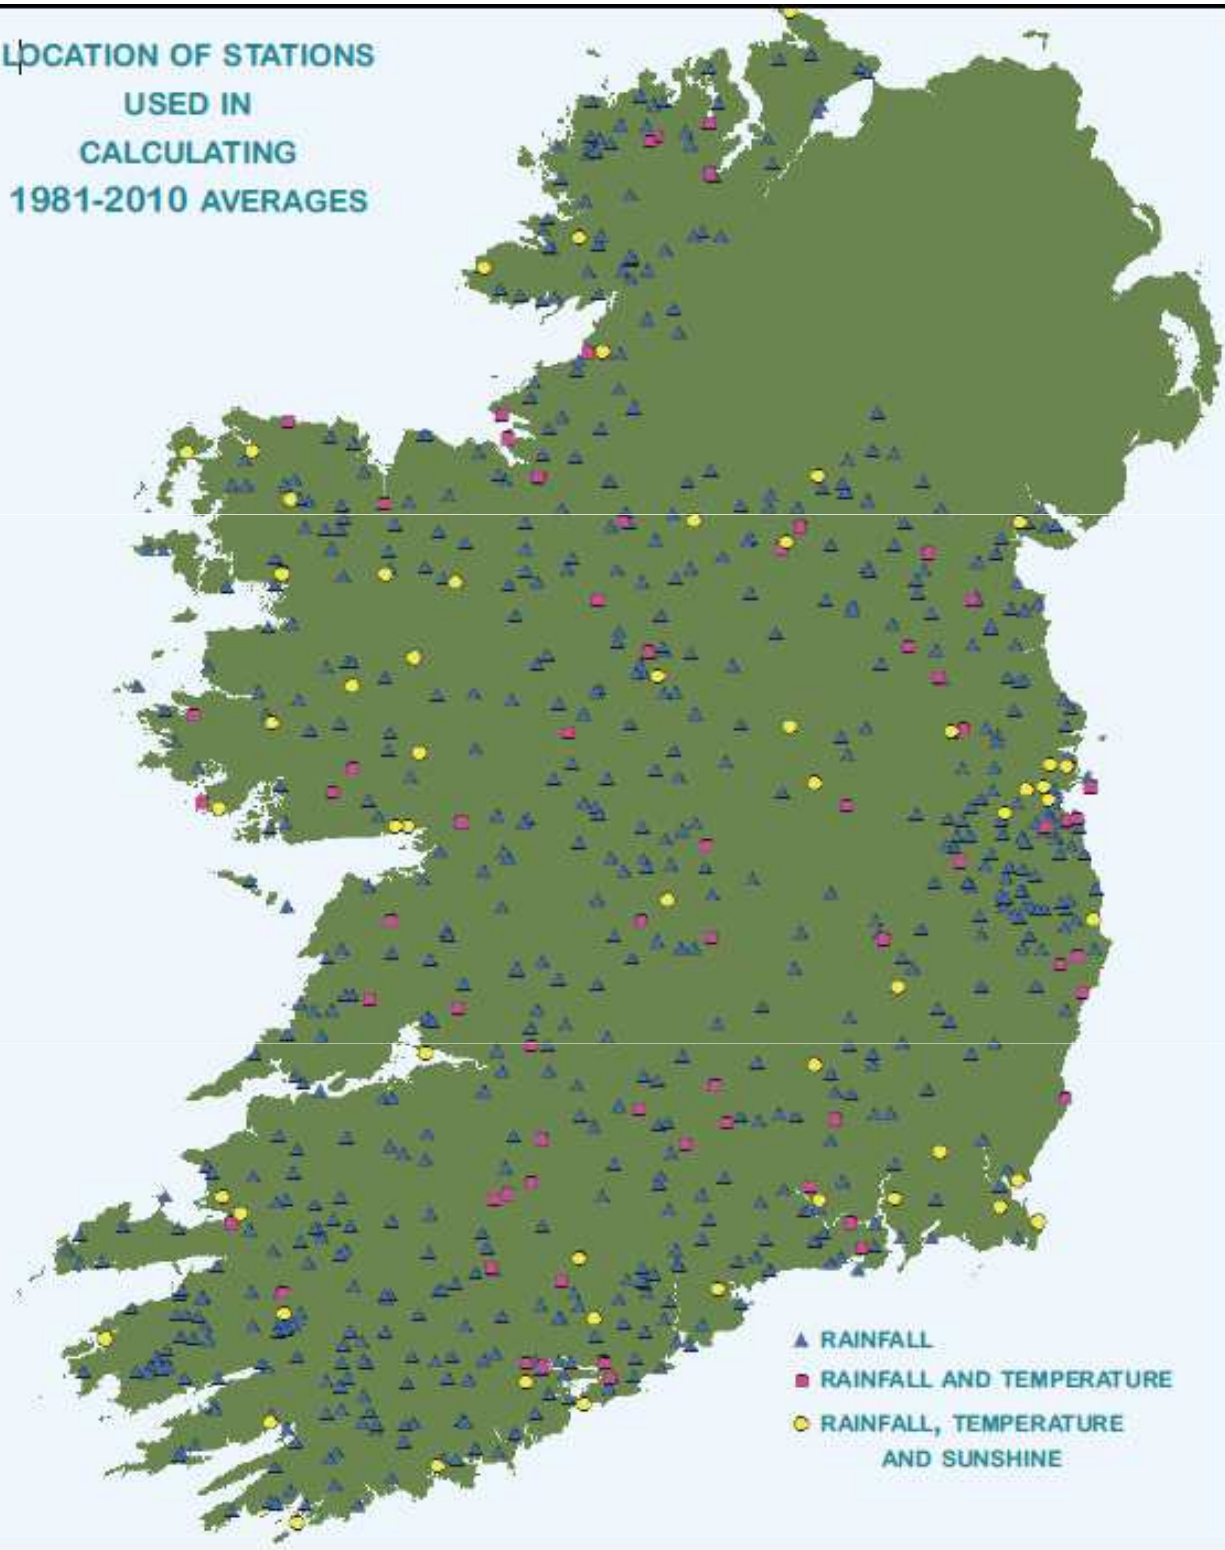

Initial break detection

Final homogenised series

LOCATION OF STATIONS
USED IN
CALCULATING
1981-2010 AVERAGES

- ▲ RAINFALL
- RAINFALL AND TEMPERATURE
- RAINFALL, TEMPERATURE AND SUNSHINE

All max and min time series

- Used homogenised long time series and homogenised approximately 90 shorter series which had infilled data.
- ~ 100 breaks
- ~30 verified and another 30 in the infilled data

Experience of using HOMER

'geographical distance' for reference stations in HOMER.

Computation of lat/lon in degree and 1/100th of degree

#####

#####

```
lat.station <- station$V2+station$V3/60.+station$V4/3600
```

```
lon.station <- station$V5+station$V6/60.+station$V7/3600
```

Stations table

Some stations in incorrect position

Stations in correct position

Support

- Version of R
- User training
- Bug reports/updates/fixes

Future work

- MASH
- Reanalysis, normals
- Data rescue; digitisation of data and metadata prior to 1961 and homogenisation of the data
